DOI: 10.18097/PBMC20236901046

Supplementary materials contain the complete list of rat brain isatin-binding proteins obtained by means of mass spectrometry-based identification of proteins of control animals (Table S1) and the animals with rotenone-induced parkinsonism (Table S2). Tables S3 and S4 show the results of proteomic identification of mouse brain proteins specific to MPTP-induced parkinsonism either in the case of primary reaction (Table S3) or the delayed (7 days) reaction (Table S4) to the neurotoxin MPTP injection.
